As stated previously, prior art of record fails to teach an optoelectronic device consisting of a waveguide formed on a substrate and having a capacitor on top to reduce cross-talk, having a gain region, a tunable region, an amplifier region, and a modulator region located in a n-type region on one side of the substrate while the capacitor is located on the other side of the substrate in an n-type region.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
